

PS IMAGO PRO 5.0 /// installation instructions

Installing PS IMAGO PRO

PS IMAGO PRO is a complete analytical reporting solution for business. This product consists of applications prepared by Predictive Solutions, together with IBM SPSS Statistics and various extensions. The installation process of PS IMAGO PRO includes the installations of IBM SPSS Statistics 25 and other components which are necessary for the functioning of the entire solution. One single setup program installs all the applications and components of the solution.

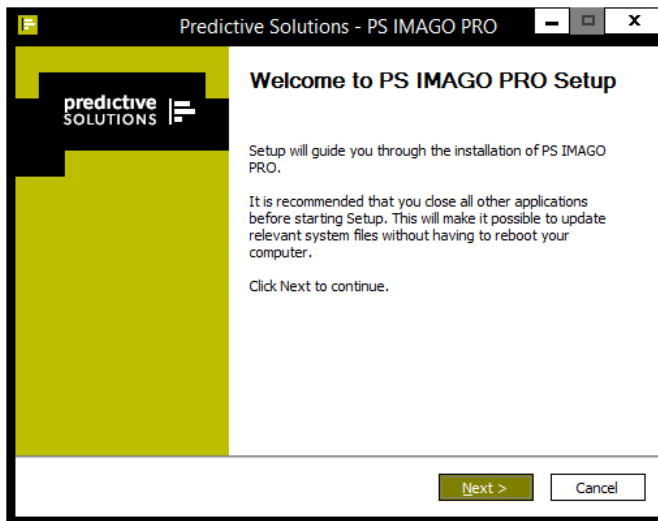

It is suggested to install PS IMAGO PRO using a local (or domain) Administrator account or any account with administrative privileges. To start right-click on *psLauncher.exe* program and choose *Run as Administrator* option from the dropdown menu. The *psLauncher.exe* application, which initiates the setup process, can also be run automatically when you insert the installation media of PS IMAGO PRO to the DVD drive.

When *psLauncher.exe* is started the main window of the installation program appears. To start the installation process click *all components*, and then follow the instructions that appear on the screen.

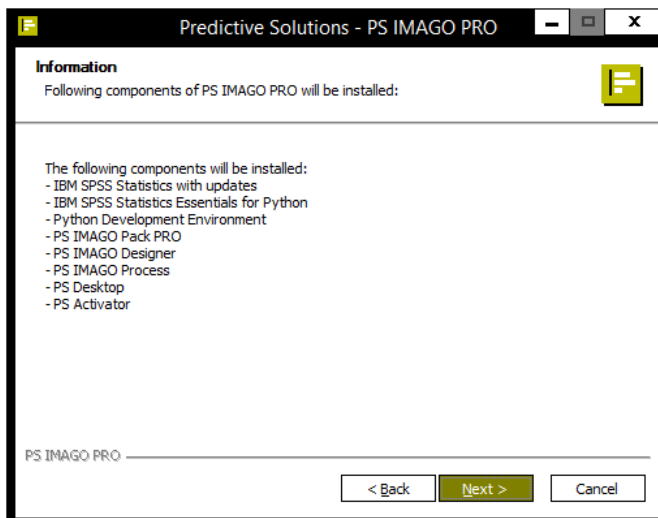

This option runs the actual setup program of PS IMAGO PRO. This *PS_IMAGO_5_PRO.exe* file that is located on the installation media in *Installation_files* folder. In case *psLauncher.exe* fails for some reason, then you can simply run this setup program (with administrative rights) directly from the folder. Using Windows Explorer, browse to DVD drive, right-click on *PS_IMAGO_5_PRO.exe* and choose *Run as Administrator* menu option. If you want to install only the application for designing reports, press *PS IMAGO Designer* item on the main window of the installation program.

First the installation process unpacks files from an archive, and then it displays the welcome screen of the installation wizard.

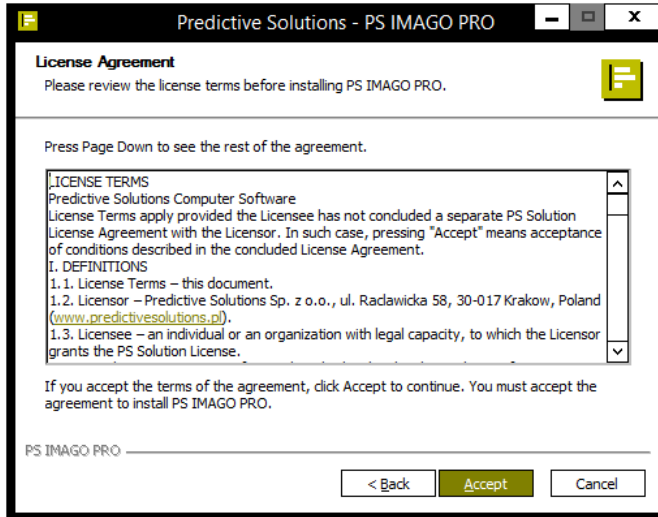

Before the major part of the installation process begins, the setup program checks your system for the presence of PS IMAGO PRODUCTS or IBM SPSS Statistics program. If one of these is already installed, then the installer stops the installation of PS IMAGO PRO. These products must be uninstalled before PS IMAGO PRO installation begins.

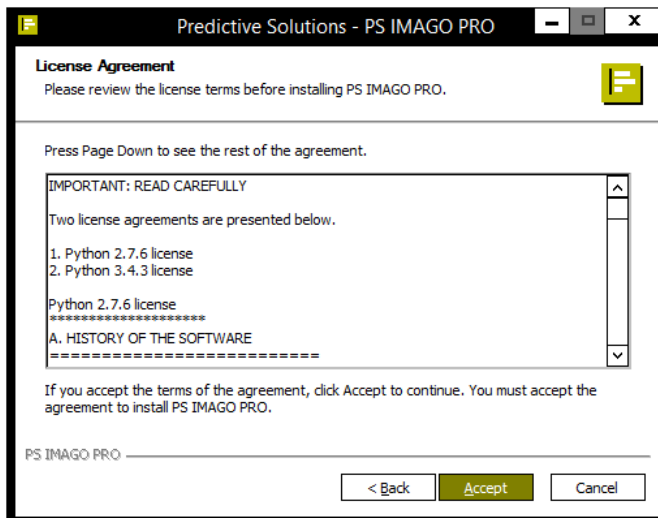

The next installation step presents the information about all components installed within PS IMAGO PRO solution.

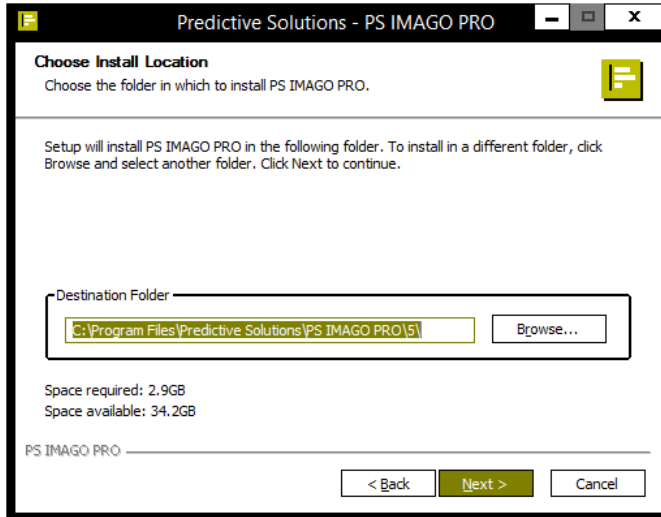

In the third step, the user must read and accept all terms of the license agreement of PS IMAGO PRO. Full text of the license for this product is also available in the document *PS_License_Agreement.pdf* located in *License_Agreement* folder. The license agreement must be read and accepted by pressing *Accept* button. This is a required step of the installation.

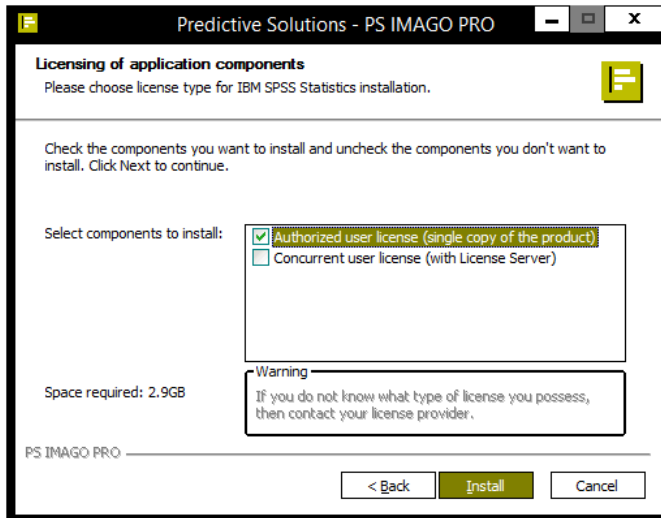

You must also accept other associated license agreement for Python environment. This is a component of IBM SPSS Statistics - Essentials for Python, that is also installed as part of PS IMAGO PRO.

The next step of the installer displays *Choose Install Location* dialog. In this window you should specify the path to the root installation folder in which all components of the solution will be installed. Additional subfolders will be created in the indicated folder. However it is suggested to leave the default location.

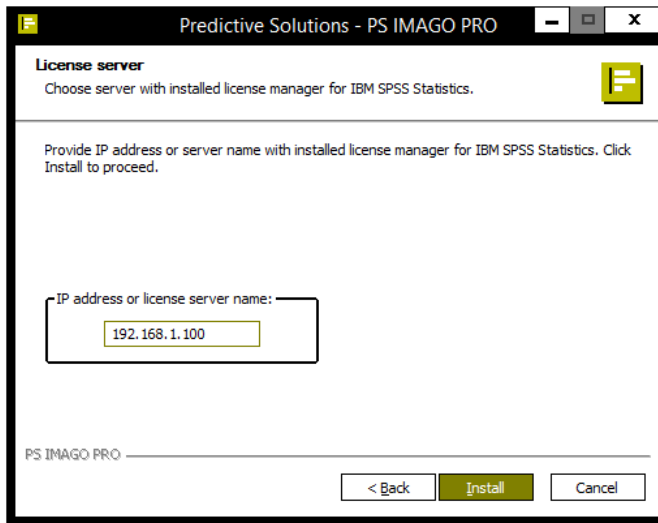

PS IMAGO PRO setup starts with the installation of IBM SPSS Statistics. At the beginning the setup asks for choosing the type of licensing. Please contact your license administrator, if you are uncertain what type of license you should choose.

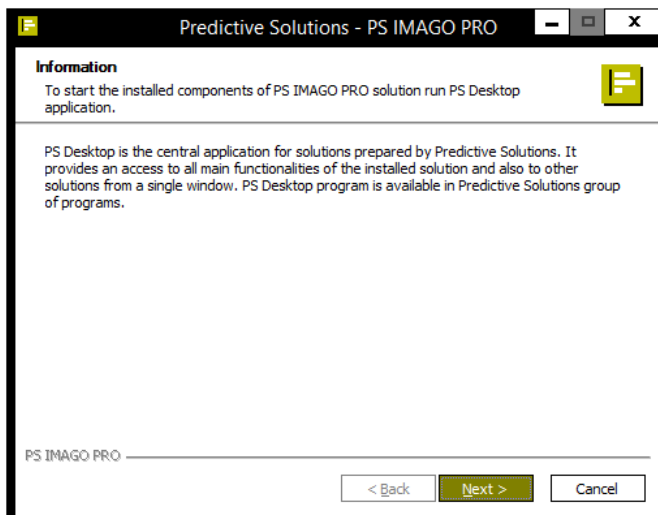

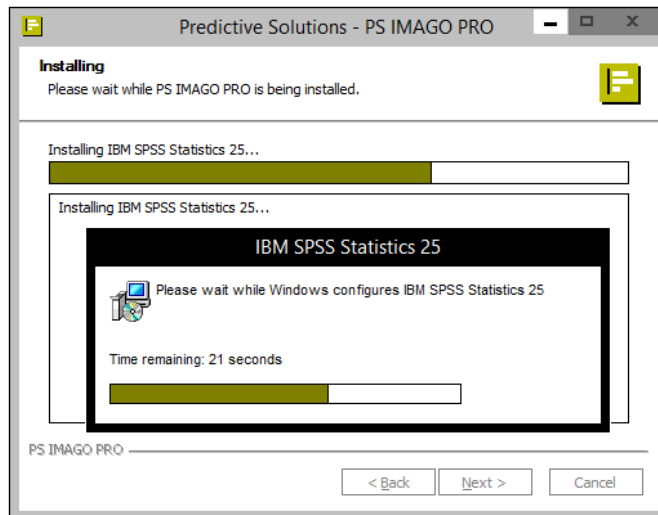

After selecting the proper type of licensing, IBM SPSS Statistics program (and its latest update, if it is available) is installed. Further steps of PS IMAGO PRO installation are performed independently after pressing the *Install* button.

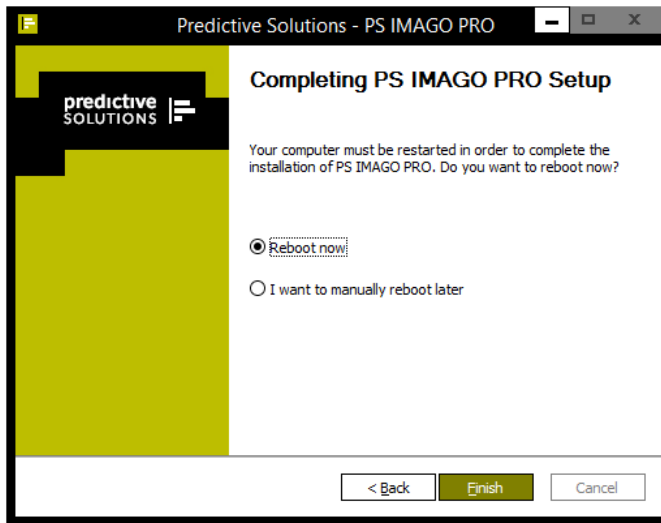

In case of concurrent user license with network license manager, you should specify an IP address or a host name of the machine in your network where PS License Server for this product is installed.

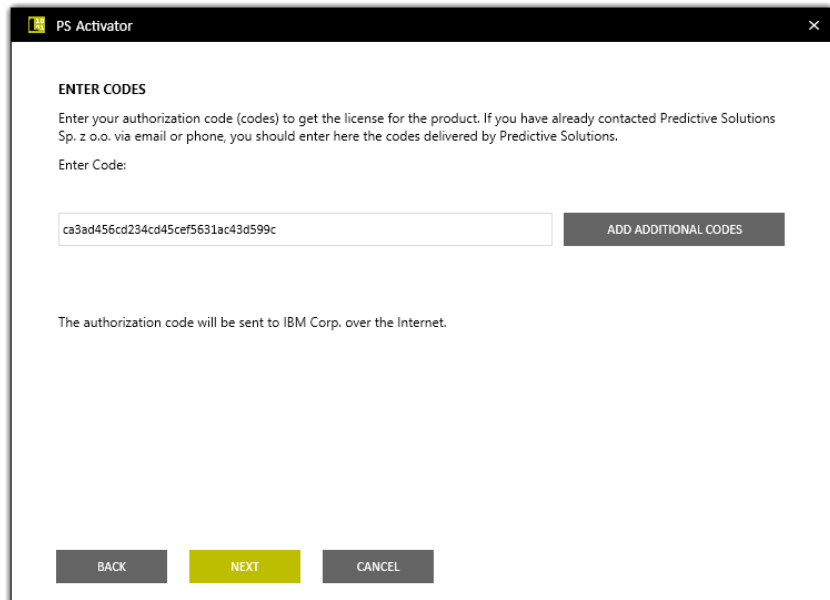

Please be patient, because full installation of PS IMAGO PRO solution and all its components may take up to several minutes.

The installer completes the installation process by asking you to restart Windows system. This is necessary for proper operation of the solution. You should do it as soon as possible particularly if at the end of the installation process rebooting of the system is not possible.

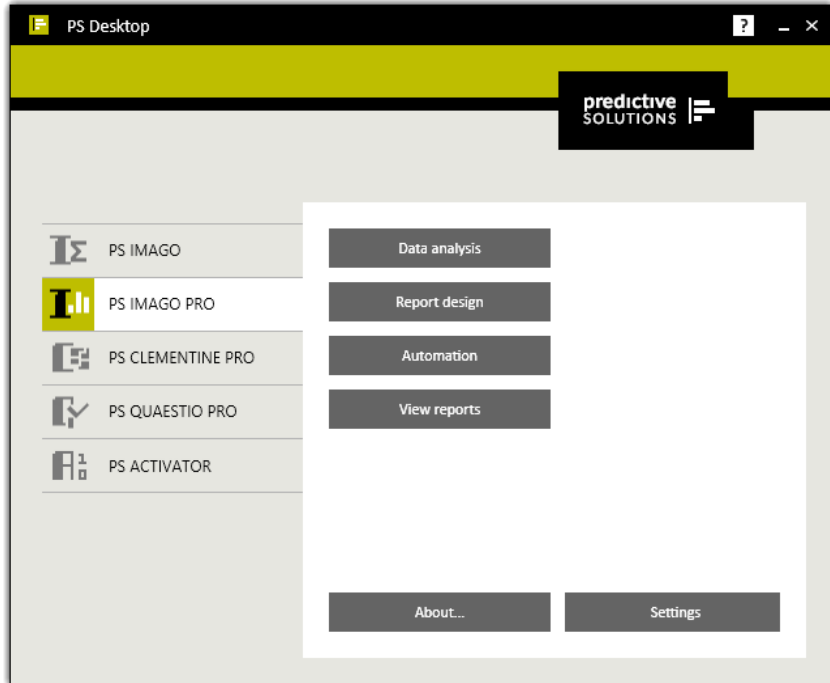

After rebooting Windows and before running IBM SPSS Statistics or PS IMAGO Designer application, you must authorize a license. PS Activator license authorization wizard is available in *Predictive Solutions* program group, accessible from the main Windows Start menu or in PS Desktop application. Third step of PS Activator wizard gives you a place to enter an authorization code. The same authorization (or license) code activates all components of PS IMAGO PRO solution (including IBM SPSS Statistics, PS IMAGO Designer).

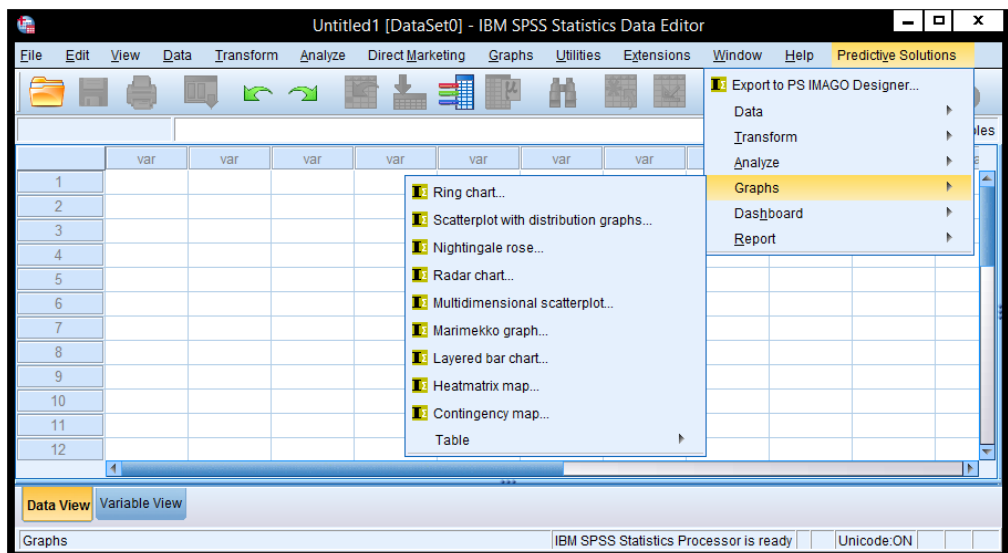

In case of concurrent user license with the presence of network license manager, the license has to be activated by an administrator on the server. It should be done before PS IMAGO PRO installation begins on computers of endusers.

Entering of the authorization code and activation of the license completes the installation process. After the correct installation of the solutions in *Predictive Solution* program group there is a shortcut to PS Desktop application. The PS Desktop provides access to various functions of the solution, including the possibility of launching analytical software. By pressing **DATA ANALYSIS** button in **PS IMAGO PRO** tab you can run IBM SPSS Statistics.

Correct installation of PS IMAGO PRO also manifests itself by the presence of the *Predictive Solutions* menu in IBM SPSS Statistics. This menu contains additional procedures that extend the functionality of IBM SPSS Statistics.

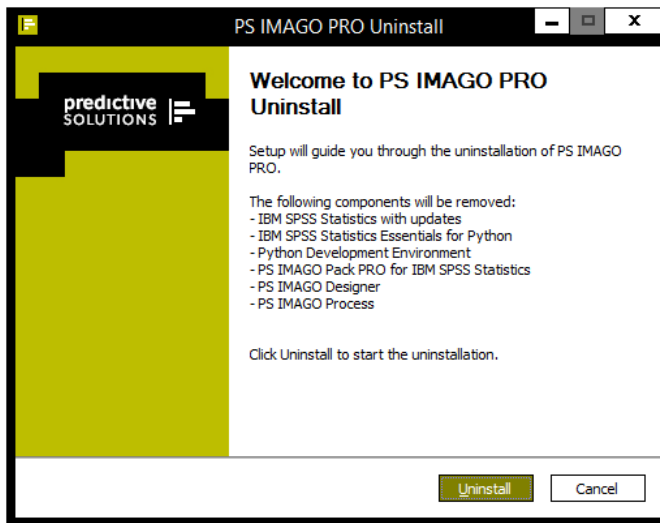

Uninstalling PS IMAGO PRO

In Windows Control Panel choose Program and Features and select the PS IMAGO PRO item on the list of installed programs. Press **UNINSTALL** button which is above the list. Before running the uninstaller you should close IBM SPSS Statistics program and other applications.

Uninstallation should be performed on the account with administrative privileges.

After uninstalling PS IMAGO PRO solution it may be necessary to restart Windows system.

Attention: The uninstaller removes all components of PS IMAGO PRO solution like files, folders and other information related to. Therefore, you should protect your own information stored in these folders, e.g. by copying them to other location before starting the uninstaller of PS IMAGO PRO.

The uninstaller doesn't remove PS Activator and PS Desktop applications these may be required to run other Predictive Solutions products. PS Activator and PS Desktop have separate uninstaller programs which permit the removal of these applications from the system.

PS IMAGO PRO software and hardware requirements

Software and system requirements for PS IMAGO PRO solution are:

- Operating system: Microsoft Windows® 7, 8.x, 10 (32- or 64-bit)
